

Techniche is an industry leader in the design and implementation of medium to large scale CCTV, Access Control, digital video recording, programmable logic controllers and integrated security systems.

You need a clear vision and expertise to navigate through the massive range of products and technologies available. From town centre applications to hotels, retail, logistics, correctional services and health & education you can rely on us to specify a system that is flexible enough to suit the application and budget.

Increasingly our clients are appreciating the benefits of digital network-based systems. Digital recording systems save time by giving instant access to recorded data without the delay inherent in conventional tape based systems.

Network Integration with other applications allows users to have cameras at remote locations and to view, store and analyse live video at multiple locations, over the local network or the Internet. They also bring major cost savings and are more convenient to install.

At the heart of Techniche is an experienced project management team. They adopt a highly structured approach to planning, controlling, and finishing a project always ensuring that the right balance resources and skills are allocated to achieve the installation as specified, on cost and on time.

In addition to these services we have developed custom in-house software used for point-of-sale interfacing, data mining, casino video queue manager, perimeter security and graphical user interface (GUI).

At Techniche we believe that customers should be able to focus on their own business critical objectives. Our role is to equip you with the tools that assure unrestricted ascent towards these objectives.

We constantly work with high profile clients. We are an appointed Geutebruck "GOLD" partner and a Honeywell "PARTNER OF CHOICE" and are associated with many of the product suppliers enabling us to deliver sophisticated systems, simply and effectively.
